A generic approach to procurement processes, methods and procedures

By Ron Watermeyer, president SAICE

Procurement activities commence once the need for procurement is identified and end when the transaction is completed.

There are six principal procurement activities and a number of generic steps that need to be taken to proceed from one activity to another. These generic steps may be categorised as either inputs towards the attainment of a milestone within the procurement process or procedural milestones that require decisions or approvals in order to proceed to the next step (see fig 1). Not all of these steps will necessarily be required in a particular procurement.

A procurement system comprises processes (see fig 1) which are underpinned by methods and procedures, which in turn are informed and shaped by the policy of an organisation (fig 2). There are a finite range of methods and procedures associated with the various procurement sub-processes. Many aspects of procurement documents that are required to solicit tender offers and to conclude contracts can at the same time be rationalised and standardised.

The starting point in the development of any procurement system is to determine the primary objectives of the system. The primary objectives of the World Bank, World Trade Organisation, and United Nations Commission on International Trade Law (UNCITRAL) may be summarised by section 217(1) of South Africa’s Constitution (Act 108 of 1996), which requires the procurement system to be fair, equitable, transparent, competitive and cost effective.

The methods of implementing preferential procurement policies to attain social and economic objectives that are least likely to compromise these objectives relate to preferring at the short-listing stage and award (tender evaluation) criteria.

Targeted procurement procedures can be used to implement preferential procurement policies relating to the targeting of enterprises and labour using preferring at the short-listing stage, or award criteria. Based on the work by the Procurement Reform Task Team in South Africa, Standards South Africa has standardised the methods associated with these procedures and has published SANS 10396 (2003), ‘Implementing preferential procurement policies using targeted construction procurements’, and the SANS 1914 (2002) family of performance-based targeted construction procurement standards (fig 3) that may be used to secure the participation of targeted enterprises and/or labour in the performance of a contract.

STANDARDISING THE APPROACH TO PROCUREMENT DOCUMENTATION

Procurement documents are required primarily to solicit tender offers and to form the basis for a contract. Figure 4 illustrates the concept of offer and acceptance that results in a contract being entered into. Procurement documents provide tenderers with the necessary inputs to allow them to compile their tender submissions. Their tender submissions are in turn inputs into the contract that may be concluded following the acceptance of their tender offer. In order to have a fair, transparent and equitable solicitation process, employers should provide tenderers with clear instructions as to how they are to submit their tender offers and inform them as to how their tenders are to be processed following their receipt.

<th>Procedure</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Negotiated procedure</td>
<td>Tender offers are solicited from a single tenderer</td>
</tr>
<tr>
<td>Nominated procedure</td>
<td>Tenderers that satisfy prescribed criteria are admitted to an electronic data base. Tenderers are invited to submit tender offers based on search criteria and their position on the data base. Tenderers are repositioned on the data base upon appointment or upon the submission of a tender offer.</td>
</tr>
<tr>
<td>Open procedure</td>
<td>Tenderers may submit tender offers in response to an advertisement by the organisation to do so</td>
</tr>
<tr>
<td>Qualified procedure</td>
<td>A call for expressions of interest is advertised and thereafter only those tenderers who have expressed interest, satisfy objective criteria and are selected to submit tender offers are invited to do so</td>
</tr>
<tr>
<td>Quotation procedure</td>
<td>Tender offers are solicited from not less than three tenderers in any manner the organisation chooses, subject to the procedures being fair, equitable, transparent, competitive and cost effective</td>
</tr>
<tr>
<td>Proposal procedure using the two-envelope system</td>
<td>Tenderers submit technical and financial proposals in two envelopes. The financial proposal is only opened should the technical proposal be found to be acceptable</td>
</tr>
<tr>
<td>Proposal procedure using the two-stage system</td>
<td>Non-financial proposal are called for. Tender offers are then invited from those tenderers that submit acceptable proposals based on revised procurement documents. Alternatively, a contract is negotiated with the tenderer scoring the highest number of evaluation points</td>
</tr>
<tr>
<td>Shopping procedure</td>
<td>Written or verbal offers are solicited in respect of readily available supplies obtained from three sources. The supplies are purchased from the source providing the lowest price once it is confirmed in writing</td>
</tr>
</tbody>
</table>

Uniformity in procurement documentation can be achieved, provided there is a complete separation in the component documents (ie the conditions of tender, the conditions of contract, the specifications and methods of measurement, and payment) that make up a procurement document between the conditions of tender, the conditions of contract, the specifications and methods of measurement and payment. Should this be done, different conditions of contract, or, for that matter, payment systems, can be used without affecting the remaining component document. SANS 10403 (2003), 'Formatting and compilation of procurement documents', provides a series of standard headings of component documents based on an 'offer' and 'acceptance' process illustrated in figure 4 (see tables 1 and 2) and provides comprehensive guidance on the formulation of these component documents.

Procurement documents comprise several component documents devoted to different topics bound together in a logical sequence. The first cluster of documents contains only those documents that are relevant to the tender enquiry (table 1) and the second cluster those documents that relate to the contract that will be created upon the acceptance of the tender (table 2).

When tenderers are invited, it is advisable, however, that three volumes be issued:

- **Volume 1**, comprising the tendering procedures (Part 1 of the tender)
- **Volume 2**, comprising the returnable documents (Part 2 of the tender and documents C1.1 and C1.2 of Part 1 of the contract and documents C2.1 and C2.2 of Part 2 of the contract, if relevant — ie all the documents in which the tenderer is required to insert data to complete his tender), and
- **Volume 3**, which contains the draft contract (ie all components of the contract that are not included in Volume 2).

Tenderers will complete and return Volume 2 as their tender submission. Organisations will compile the contract (see table 2) from the tender submission (Volume 2). In this manner, the final contract will contain all the provisions agreed to by the parties during the tender process and will not include redundant information relating to the process that led to the formation and signing of the contract (see fig 5).

Users of this system who are familiar with the standardised procurement documents of an organisation will only need to read the project specific sections for any specific project in order to know what the procurement entails. On the other hand, users who are not familiar with an organisation's standardised documents can quickly locate information that they may require should they have a working knowledge of the framework for the compilation of procurement documents provided in SANS 10403.
STANDARDISING THE APPROACH TO PROCUREMENT METHODS AND PROCEDURES

Procurement can be broadly categorised in accordance with the provisions of table 3. In many procurement systems, for example those of the World Bank and the European Union, each category of procurement is dealt with separately and separate implementation guidelines/regulations are provided. This compartmentalised approach to procurement causes much confusion and makes procurement unnecessarily complex. An alternative approach is to develop a generic procurement system and then to identify which methods and procedures are best suited to particular categories of procurement.

An analysis of the World Bank procurement procedures, WTO's Government Procurement Agreement, the UNICTRAL Model Law on the Procurement of Goods, Construction and Services complete with a guide to enactment, and a number of South African procurement procedures concluded that:

- there are eight generic procurement procedures associated with procurements other than those relating to disposals (see table 4);
- there are four generic evaluation methods (see table 5), and
- eligibility criteria can form part of a procurement procedure.

Not all these procurement procedures are necessarily appropriate to the procurement of all categories of procurement, namely supplies, services and engineering and construction works. These procedures facilitate the solicitation of tender offers, that is, the activities and sub-activities associated with 'solicit tender offers' activity shown in Figure 1.

Disposals, on the other hand, may be undertaken using one of the following procedures:

- the negotiated procedure as described in table 4
- the open procedure as described in table 4
- the qualified procedure as described in table 4, or
- public auction, that is, the advertising and displaying of items and assets that are to be auctioned prior to their auction sale.

Eligibility criteria in the form of attaining a minimum quality score can provide a simple and cost-effective alternative to the scoring of quality in tender submissions in professional service contracts. In this procedure, the scoring of quality is merely to establish that the tenderer is capable of providing the service and to reject the tender submissions of those who fail to attain the threshold score. Thereafter the tender offers can be evaluated on the basis of price or price and preference.

Combinations of the generic procedures and methods outlined in tables 4 and 5 with or without eligibility criteria, can be used to simulate most international procurement procedures and methods applicable to supplies, services and works (see fig 6). Table 6 illustrates this relationship with the World Bank's Guidelines for the Selection and Employment of Consultants by World Bank Borrowers and these generic procedures.

Quality (ie totality of features and characteristics of a product or service that bear on its ability to satisfy stated or implied needs) can be addressed in procurement using one of the methods outlined in table 7 under the circumstances that are indicated in the table.

</tr>
</tbody>
</table>

There are a number of other procedures that may be standardised. These include:
- requirements for the preparation of specifications
- conditions of tender should they be framed around the obligations of the tenderer and the undertakings of the employer (see table 8)
- conditions for the calling for expressions of interest should they be framed around the obligations of the respondent and the undertakings of the employer
- advertisements
- tender procedures (receipt of tender submissions and opening of tender submissions)
- evaluation of tender submissions (disqualification of tenders, test for responsiveness, arithmetical errors, ranking and scoring of responsive tenderers, risk assessment, negotiations with tenderers, and tender evaluation reports)
- award of contracts
- contract administration
- resolution of disputes

STANDARDISING CONSTRUCTION PROCUREMENT PROCESSES, PROCEDURES AND METHODS

SANS 294, 'Construction procurement processes, procedures and methods', provides processes, methods and procedures for the establishment within an organisation of a procurement system that is fair, equitable, transparent, competitive and cost effective. SANS 294 accordingly

- describes generic procurement processes around which an organisation may develop its procurement system
- establishes minimum requirements for the conduct of an organisation's employees, agents, board members and office bearers when engaging in procurement
- establishes the framework for the development of an organisation's procurement policy including any preferential procurement policy
- establishes generic methods and procedures for procurements including those pertaining to disposals, and
- provides standard conditions of tender and conditions for the calling for expressions of interest

SANS 294 provides the generic processes around which an organisation can develop its procurement system, as illustrated in figure 7. It provides standard generic methods and procedures which can by reference be adopted by organisations in their procurement system.

The processes, methods and procedures embodied in SANS 294 are based on an underlying requirement for the procurement system to be fair, equitable, transparent, competitive and cost effective. This

<tr>
<td>Evaluation criteria</td>
<td>Evaluate specified quality criteria as an integral part of the tender offer</td>
<td>Specialist work requiring considerable innovation, creativity, expertise and/or skill or work that has a high downstream impact. Partnering approaches where the scope of work is ill defined when the partners are selected</td>
</tr>
</tbody>
</table>

SANS 294 is based on the premise that, subject to prevailing legislation, preferential procurement policies are implemented using one of the following methods:

- preferences at the short-listing stage
- accelerated rotation on an electronic data base where the nominated procedure is used
- tender evaluation criteria, and
- breaking down (unbundling) of projects into smaller contracts to facilitate the participation of targeted enterprises

SANS 294 is a generic standard that can be applied to both the public and private sectors. As such, it contains the full range of methods and procedures that organisations may require in their procurements without prescribing when and under what circumstances such methods may be utilised or imposing the manner in which procurement is to be managed and controlled. Being generic in nature, it does not impose matters of policy or organisational and industry standards. Rather, it establishes a rule-based framework within which an organisation may develop its procurement policy in order to implement the wide range of standard procurement methods that necessitates the following two important principles be adhered to:

- All evaluation criteria must be made known to tenderers or respondents in the procurement documents.
- The only grounds for not awarding a tender to a tenderer are:
  - The tenderer is under restrictions from participating in the organisation's procurement for engaging in corrupt and fraudulent practice, or has principals who are under such restrictions.
  - The tenderer cannot demonstrate that he possesses the necessary professional and technical qualifications, professional and technical competence, financial resources, equipment and other physical facilities, managerial capability, reliability, experience and reputation, and the personnel, to perform the contract.

- The tenderer does not have legal capacity to enter into the contract.
- The tenderer is insolvent, in receivership, bankrupt or being wound up, has his affairs administered by a court or a judicial officer, has suspended his business activities, or is subject to legal proceedings in respect of any of the foregoing.
- The tenderer does not satisfy the legal requirements, if any, stated in the organisation's procurement policy.

- The tenderer may not be able to perform the contract in the best interest of the organisation, owing to conflicts of interest.

An organisation's executive decides that it requires a procurement system that is fair, equitable, transparent, competitive and cost effective.

Organisation's executive:
- Designates persons to manage and control procurement activities
- Develops and documents its procurement policy which, as a minimum, must establish:
  - procurement procedures in relation to different categories of contract
  - the manner in which procurements are to be managed and controlled
  - recording and reporting requirements
  - risk management requirements
  - legal grounds for rejecting a tender offer
  - tender evaluation committees
  - procedures for placing contractions and persons under restrictions
  - advertising arrangements
  - applicable standard forms of contract
  - levels of retention and bonds/ securities
  - insurance arrangements
  - cost of procurement documents and authorised percentage increase in the final contract amount
- Develops and documents its preferential procurement policy, if any, which, as a minimum, must establish:
  - policy themes
  - specific goals which are to be pursued
  - targeting strategies
  - the means by which goals are to be monitored for contract compliance, and
  - reporting and recording requirements

Organisation develops and documents its procurement system, around a process which commences once the need for procurement is identified and ends when the transaction is completed.

Organisation implements its procurement system in accordance with provisions of SANS 294 and publishes its procurement system and instructs employees in its usage.

Note: Policy as referred to in SANS 294 generally relates to choices made in the use of generic procedures and methods and the circumstances under which a certain procedure should be used.

Organisation develops code of conduct for their procurement and procedures for disciplining those that transgress the code.

Figure 7 Establishing a procurement system within an organisation in accordance with the requirements of SANS 294

References

ods and procedures outlined in tables 4 and 5. Compliance with the requirements of SANS 294 will result in a procurement system that not only satisfies requirements for the procurement system to be fair, equitable, transparent, competitive and cost effective but also one that is predictable and ensures equal treatment of tenderers.
